

### Introduction

The Michigan Department of Health and Human Services (MDHHS) requires a survey be administered annually to programs identified by the Michigan Quality Improvement (QI) Council. The Michigan QI Council has chosen the Home-Based Services program as one of the programs for 2016. The program completed the Youth Satisfaction Survey for Families (YSSF) over a two-week period of time. MDHHS provides implementation guidelines and instructions to each Prepaid Inpatient Health Plan (PIHP). Each PIHP is to administer the survey within the time frame allotted by MDHHS. The survey results are returned to MDHHS via a supplied excel workbook.

Each PIHP, in collaboration with the Community Mental Health Services Program (CMHSP) and their contracted providers, utilized the YSSF to conduct a region wide perception of care survey to determine any areas that may be deficient within the region. The data obtained by each CMHSP was provided to Mid-State Health Network (MSHN) for regional analysis. The survey outcomes will be compared to the previous years Perception of Care Reports and is reported to MSHN's Quality Improvement Council (QIC).

### **Survey Response Rates**

Clinicians within the Home-Based Services program were given a tally form to track the survey response rate for their consumers. Consumers were given an option to decline answering the survey questions. Those consumers who declined were removed from the total number of surveys distributed. The response rates were calculated by dividing the number of surveys that were received by the number of surveys that were distributed.

**Figure 1** indicates the return rate for each CMHSP where data was available prior to February 26<sup>th</sup>. Any surveys received after February 26<sup>th</sup> were not included in the results.

#### Methodology

The sample was a convenience sample of all who were scheduled to be seen within a pre-identified time frame. The Home-Based Services (HBS) survey population was given a choice of any two-week time frame from January 30<sup>th</sup> to February 26, 2017. The Youth, 17 years and younger, who were receiving services from the Home-Based Services program received the YSSF-36 survey. The raw data was required to be received by MDHHS no later than March 31, 2017. MDHHS will prepare an analysis, which will include-comparison data of PIHPs in Michigan and CMHSPs within each PIHP. Consumers did have the option to decline participation. If a consumer declined, this was noted and removed from the number distributed.

There were two optional changes in the implementation process that were implemented starting in FY2012. Based on discussions with Substance Abuse and Mental Health Services Administration (SAMHSA) and information from other states that implement the YSSF, the MDHHS QIC decided that PIHPs can opt to assign numerical identifiers to the MHSIP in order to identify the respondents. The PIHP was to use the selected field in the data entry forms to inform MDHHS whether they have chosen to assign identifiers. These identifiers are for the PIHPs use only, and are not to be shared with MDHHS. MSHN did not require the use of identifiers for the survey.

#### Scoring

YSSF – There are six domains included in the survey. Each domain has several individual questions related to the domain topic. Each question in the domain is required to have a response choice of 1 - 5 in order for the domain to be included in the sample. If one question is left blank, the responses of the remaining questions for that domain are excluded from the calculations of that domain. The domains are as follows: quality and appropriateness (satisfaction with service), access to care, family participation in treatment planning, outcomes of care, cultural sensitivity of staff, and social connectedness. There are 5 response choices for each question within the domain, which are assigned a numeric value.

Strongly Agree=5

Disagree=2

Agree=4

Strongly Disagree=1

Neutral=3

The mean of each individual question is calculated. Those greater than or equal to 3.5 are considered to be "in agreement". The total number of respondents who are "in agreement" is then divided by the total respondents. The resultant number is then multiplied by 100 to provide a percentage. Those questions that have a "blank" are removed from the sample.

### Data Analysis

Each survey was entered into an excel spreadsheet. The HBS program was categorized by numeric codes provided by MDHHS.

The logic for Fiscal Year 2016 was updated to include steps that the state utilizes to calculate the domain percentage scores that were not originally included in the Scoring Protocols provided by the state. MSHN QIC decided to adopt these changes following Fiscal Year 2015; the Scoring Protocols are as follows:

### 1. Subscale Means

There are 6 subscales in the survey. To obtain individual subscale scores, each response is assigned the following numerical values:

Strong Agree = 5 Agree = 4 Neutral = 3 Disagree = 2 Strongly Disagree = 1

For each respondent, scores for each item in the subscale are summed, then divided by the total number of items in the subscale. The result is a mean score for each individual respondent that may vary between 1 and 5.

To obtain the program mean, individual means are summed and then divided by the total number of respondents.

Additional logic was obtained from the State which was not originally included in the Scoring Protocols for prior years. The logic clarified that individuals who are missing more than 1/3 of total responses (blanks, or invalid response) are removed completely from the report for calculating subscale scores. Also within the subscales, if an individual is missing 1 or more of the included questions (blanks, or invalid responses) they are removed completely from the subscale scoring for that specific subscale. (The individuals' valid responses are not removed from calculating the response totals to individual questions in Attachment A; even if they were removed from the subscale).

### 2. Percentage of Respondents in Agreement (by subscale)

Individual subscale means are computed for each respondent with valid data using the protocol described in section 1.

Individual mean scores greater than or equal to 3.5 are classified as being "in agreement." The number of respondents "in agreement" is then divided by the total number of respondents with the result multiplied by 100.

The results are analyzed as follows:

#### PIHP

- By Domain
- By Domain Line Item

### CMHSP (Attachment A - YSSF)

### **Survey Findings**

The Youth Perception of Care Survey

**Figure 2** demonstrates the percentage of agreement for each domain. Please refer to the scoring methodology above with questions related to the calculations. Each domain scored above the desired threshold of 80% except the "Perception of Outcomes of Services" and "Perception of Social Functioning". MSHN scored the highest in the "Perception of Cultural Sensitivity", "Perception of Participation in Treatment", "Perception of Access", "Appropriateness", and the "Perception of Social Connectedness" domains. This indicates:

- a) The location of services are acceptable to the families who responded to the survey (Q8 97%, 366/379)
- b) The times that services were available are acceptable to the families who responded to the survey (Q9 96%, 365/379)
- c) Staff in the MSHN speak to the children in Home-Based services in a way they understand (Q14 99%, 359/362)
- d) Staff in the MSHN treat the children with respect (Q12 99%, 357/362)
- e) Staff respect the family's religious or spiritual beliefs (Q13 97%, 351/362)
- f) Staff are sensitive to each person's cultural or ethnic background (Q15 97%, 350/362)
- g) Families felt they were able to participate in their child's treatment (Q6 99%, 370/377)
- h) Families felt they were able to choose their child's services (Q2 90%, 341/377)
- i) Families felt they were able to choose their child's treatment goals (Q3 97%, 367/377).

The percentage of respondents who were in agreement with the survey questions for the domain "Perception of Outcomes of Services" was 65%, which was below the desired threshold of 80%.

### The Respondents indicated:

- a) Their child was better at handling their daily life (Q16 68%, 247/361).
- b) Their child was better at coping when things go wrong (Q20 59%, 212/361).
- c) Families indicated their child gets along better with friends and other people (Q18 64%, 230/361).
- d) Families indicated their child gets along better with their family (Q17 67%, 242/361).
- e) Their child was doing better in school and/or work (Q19 67%, 242/361).
- f) Families indicated their child is able to do things that he/she wants to do (Q22 68%, 245/361).
- g) Families indicated they were happy with their family life right now (Q21 61%, 222/361).

The percentages and respondent numbers for each CMHSP Participant is located in Attachment A.

#### Recommendations/Improvement Opportunities

The results will be reviewed by the MSHN Quality Improvement Council and the Regional Consumer Advisory Council to determine possible region wide improvement efforts as well as identification of any trends that have occurred from year to year. The results will be compared to national averages as available. The areas of improvement will be targeted towards the domains with the lower average scores (based on the regional average of all scores) and those domains that have shown a decrease from the previous years. Each CMHSP will also review their local results for areas of improvement at the local level. It is also recommended that those with a low number of returned responses review their process and determine if additional action is necessary to increase the response rate. The low number of responses may result in an acceptable threshold based on the standard set or it may result in an unacceptable threshold. The low numbers may also impact the ability for the results to be generalized throughout the population.

Completed by: MSHN Date: May 2017

Revised: June 2017 & July 2017

MSHN QIC Approved: 06/22/17
